

STAINLESS STEEL FRAMES – CARE AND MAINTENANCE

It is important to remember that an upgrade to stainless steel does not mean that your frame and hardware is "maintenance-free." As with any investment, proper care is essential to maintaining beauty and performance.

Care and maintenance

1. Fittings will freeze up if they're exposed to dirt or salt air for long periods. The salt from spray or splashes will work its merry way into these simple devices, causing them to jam at inconvenient moments.
2. Keep your frame clean with stainless steel cleaners only, taking care to read the manufacturer's directions for proper use.
3. Never use harsh abrasives, scouring pads or steel wool as they will damage the finish, creating microscopic crevices and pits that will collect impurities and invite the onset of rust and corrosion.
